*Handling the Sick* - Tom Olson 2004

"Handling the Sick is the story of 838 women who entered St.

Luke's Hospital Training School for Nurses, St. Paul, Minnesota, from 1892-1937. Their story addresses a fundamental question about nursing that has yet to be answered: is nursing a craft or a profession? It also addresses the colliding visions of nursing factions that for more than a century have disagreed on the inherent traits and formal preparation a nurse has needed." "The women of St. Luke's were engaged in the most practical of all occupations open to women, a rare one in which their strength, experience, and skill were prized above all else. They firmly believed that the key to success in nursing was apprenticeship training. Apprenticeship, not schooling, was the cornerstone on which all else rested." "This study unites the opposing visions of those who led nursing toward professional status and those who saw it as a craft. Physicality, strength of will, an abiding emphasis on practicality, and a hierarchy based on a deep pride in craft

skills have been essential elements of nursing. Nursing can look to its complex history to develop an integrated model of nursing, one drawing on both academic training and the immediate realities involved in "handling the sick."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. ## **The Future of Nursing -**

Institute of Medicine

2011-02-08

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute

residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates.

Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
