The Future of Nursing - Institute of Medicine 2011-02-08

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its

members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Nurses on the Move - Mireille Kingma 2018-07-05

South African nurses care for patients in London, hospitals recruit Filipino nurses to Los Angeles, and Chinese nurses practice their profession in Ireland. In every industrialized country of the world, patients today increasingly find that the nurses who care for them come from a vast array of countries. In the first book on international nurse migration, Mireille Kingma investigates one of today's most important health care trends. The personal stories of migrant nurses that fill this book contrast the nightmarish existences of some with the successes of others. Health systems in industrialized countries now depend on nurses from the developing world to address their nursing shortages. This situation raises a host of thorny questions. What causes nurses to decide to migrate? Is this migration voluntary or in some way coerced? When developing countries are faced with nurse vacancy rates of more than 40 percent, is recruitment by industrialized countries fair play in a

competitive market or a new form of colonialization? What happens to these workers—and the patients left behind—when they migrate? What safeguards will protect nurses and the patients they find in their new workplaces? Highlighting the complexity of the international rules and regulations now being constructed to facilitate the lucrative trade in human services, Kingma presents a new way to think about the migration of skilled health-sector labor as well as the strategies needed to make migration work for individuals, patients, and the health systems on which they depend.

Politics of the Womb - Lynn Thomas 2003-08-20

In more than a metaphorical sense, the womb has proven to be an important site of political struggle in and about Africa. By examining the political significance—and complex ramifications—of reproductive controversies in twentieth-century Kenya, this book explores why and how control of female initiation, abortion, childbirth, and premarital pregnancy have been crucial to the exercise of colonial and postcolonial

power. This innovative book enriches the study of gender, reproduction, sexuality, and African history by revealing how reproductive controversies challenged long-standing social hierarchies and contributed to the construction of new ones that continue to influence the fraught politics of abortion, birth control, female genital cutting, and HIV/AIDS in Africa.

Children and AIDS - Margaret Lombe 2017-05-08

The disproportional loss of individuals to HIV/AIDS in their most productive years raises concerns over the welfare of surviving members of affected families and communities. One consequence of the rapid increase in adult mortality is the rise in the proportion of children who are orphaned. Sub-Saharan Africa, accounts for about 90 percent of

these. Mainly due to the staggering toll of HIV/AIDS, research effort has focused on treatment and prevention. Children have received attention primarily in relation to 'mother to child transmission' and paediatric AIDS. These issues are important and compelling but fail to capture the whole story - the unprecedented surge in the number of children made vulnerable by HIV/AIDS. In this book we reflect on the plight of children classified as vulnerable, review interventions implemented to improve their welfare and grapple with the concept of vulnerability as it relates to human rights and the African child.
