Introduction to Islamic Banking and Finance - Brian Kettell 2011-10-07

Introduction to Islamic Banking and Finance is a succinct guide to the key characteristics of Islamic banking highlighting how these differ from conventional banking. This detailed book illustrates how Islamic banking is consistent with the Sharia'a, a key element of which is the prohibition on collecting and paying interest. This central religious precept appears to rule out most aspects of modern finance but it does allow money to be used for trading tangible assets and business, which can then generate a profit. Brian Kettell's book looks at all aspects of Islamic banking, including chapters on its creation and evolution through to detailed discussions of the issues involved in the Sharia'a contracts of Murabaha, Mudaraba, Musharaka, Ijara, Istisna'a, and Salam. Islamic insurance (Takaful) is also covered. Finally the book takes a look at Sharia'a law and Sharia'a boards, indicating the roles and responsibilities that come with membership. Islamic banks have been operating in places such as Bahrain, Saudi Arabia, Malaysia and Dubai for some time. Conventional bankers have traditionally viewed the sector as a small, exotic niche but recent years have seen a dramatic surge in popularity. A number of Western investment banks have started working with Muslim clerics to create new ranges of financial products designed for devout Muslims, a large and growing market. Although estimates of the size of the Islamic finance industry vary greatly, everyone agrees that it is expanding rapidly and this is the perfect book for anyone looking to understand the industry.

International Arbitration in the Energy Sector - Maxi Scherer 2018-02-22

Disputes in the energy and natural resources sector are at the heart of international arbitration. With more arbitrations arising in the international energy sector than in any other sector, it is not surprising that the highest valued awards in the history of arbitration come from energy-related arbitrations. Energy disputes often involve complex and

controversial issues relating to security, sovereignty, and public welfare. International Arbitration in the Energy Sector puts international energy disputes into a global context, providing broad coverage of different forms and systems of dispute resolution across both renewable and non-renewable sectors. With contributions from leading practitioners, arbitrators, academics, and industry experts from across the globe, the eighteen chapters in the book enable readers to compare the approaches to, and learnings from, energy arbitrations across various legal systems and geographic regions. After outlining the international energy arbitration legal framework, the text delves into a detailed analysis of the problems which regularly arise in practice. These include, among other things, commercial disputes in Part I (e.g. over the upstream oil sector and long-term gas supply contracts), investor-state disputes in Part II (e.g. under the Energy Charter Treaty), and public international law disputes in Part III (e.g. concerning international boundaries and the distribution of natural resources). Alongside recent developments in the international energy sector, attention is given to climate and sustainable development disputes, which raise important questions about enforcing sustainability objectives on individuals, corporations, and states. Backed by analyses of arbitral awards, national court and international tribunal decisions, treaties, and other international legal instruments, as well as current events and news in the energy industry, this text offers a unique contribution to international energy literature and provides insightful commentary on the prevalent issues in the field. It is essential reading for any practitioner or researcher in the energy and natural resources sector.

Refund Guarantees - Mark Davis 2015-05-22

A refund guarantee is an essential component of almost every shipbuilding project, without which the buyer will be unwilling or unable to proceed. There is no standard form of refund guarantee in universal usage, and both the form and substance of refund guarantee instruments vary widely from case to case. The ambiguity or uncertainty of the meaning of refund guarantee instruments, against a backdrop of a sharp downturn in the shipping markets, has led to numerous disputes in recent years concerning refund guarantees, which have been the subject of a number of important decisions of the English Courts. This is the first English law text book dedicated to the subject of refund guarantees. It provides essential guidance as to the issues arising and the pitfalls to be avoided. It analyses the specimen form of guarantee annexed to Bimco's NEWBUILDCON form, and covers topics such as the circumstances in which the liability of the guarantor may be discharged, and when a builder may be entitled to obtain an injunction to restrain payment under a refund guarantee. It will be an essential and practical guide for those engaged in the shipbuilding industry, including shipbuilders, shipowners, banks and insurance companies, P&I clubs, and those advising them.

The Law of Shipbuilding Contracts - Simon Curtis 2014-04-03

This is the leading text on shipbuilding and marine construction, already widely used on a global basis by shipowners, shipbuilders and their commercial and legal advisers. It is now ten years since the last edition and much has changed in the world of shipbuilding since then, particularly in the period since 2008 which has seen numerous attempts by owners to renegotiate the prices and/or delivery dates of tonnage and an enormous increase in the level of "vessel rejection" and cancellation disputes. The Law of Shipbuilding Contracts examines the principles of English contract law as these apply to shipbuilding. This edition comments in detail upon the Shipbuilders' Association of Japan Form but now contrasts this with the NEWBUILDCON from BIMCO in 2007 and the China Maritime Arbitration Commission Forms from 2011 where these are significantly different. It also includes sections dealing with agreements ancillary to the shipbuilding contract and conversion contracts. Overview of book: Since the last edition in 2002, China has become a major global exporter of newbuildings and new BIMCO shipbuilding contract form has been published. Although retaining the original format of commentary on the Japanese (SAJ) standard form shipbuilding contract, the new edition contrasts this with the BIMCO form and the recently published China Maritime Arbitration Commission (CMAC) form in order to provide a broad ranging analysis of this complex subject. The book details the principles of English contract law as these apply to international shipbuilding. It will, as in the previous editions, also include sections dealing with the guarantees and other agreements which support the shipbuilding contract and with ship conversion contracts Essential reading for: - Purchasers and charterers of newbuilding tonnage - Shipbuilders and offshore construction yards - Lawyers and insurers working in the maritime and offshore oil and gas sectors - Banks and other finance providers
Maritime Economics - Martin Stopford 1997
