The book also encompasses the loss of responsiveness to growth factors in cell senescence; the integration of cellular-molecular and neuroendocrine concepts of aging; changes and inactivation of enzymes during aging; and the relationship of aging with free radicals. Meditation for Busy People - Osho 2014-10-20

Meditation for Busy People offers simple strategies to reduce tension, minimize chronic stress, and quickly relax and unwind. Nobody

needs meditation more than people who have no time to meditate. These busy people may have tried meditation but given it up, as it seems so difficult to integrate into a hectic lifestyle. Most traditional meditation techniques were developed thousands of years ago for people living a very different lifestyle than today. Few people today find it easy to just sit down and relax. Meditation for Busy People is filled with methods that can actually be integrated into everyday life. A morning commute becomes a centering exercise, and the street noises outside an apartment window in the city become an aid rather than a distraction to finding the silent space within. Both active and passive meditation techniques are covered, and the aim of all the techniques is to teach the practitioner how to find the stillness in the storm of everyday life. Many methods are specially designed to be integrated into the reader's everyday routines, so that they soon can tackle even the most hectic day with an attitude of relaxed calm and

playfulness.

Ageing Europe - Alan Walker 1997

This book presents findings from recent policy oriented research undertaken by the EU's Observatory on Ageing and Older People: the most definitive account to date of socio-economic policies affecting older people and the extent of their social integration in European society. The book also presents the results from a specially commissioned Eurobarometer survey of public attitudes to ageing and older people conducted in twelve European Union countries. Overall it provides a unique and comprehensive portrait of how older people are perceived by the general public in the EU and how they view themselves and the ageing process. The book criticizes European countries for failing to come to terms with the fact of societal ageing and challenges them and the EU itself to ensure the social integration of older people.

The ESC Textbook of Sports Cardiology -

Antonio Pelliccia 2019-03-14

Sports and exercise have been intensely

advocated as protective lifestyle measures which prevent or reduce the risk of severe health issues, including cardiovascular disease. More extreme forms of sports (for instance at high altitudes) have been identified as an important way of promoting cardiovascular adaptation, but have also been associated with adverse effects and even major cardiovascular events in predisposed individuals. Participating in more commonplace sports and exercise, such as football, may also increase a person's risk of cardiac events. This publication is timely in the light of a burgeoning number of clinical papers in the field. The ESC Textbook of Sports Cardiology provides an overview of the detection and treatment of cardiovascular disease in elite athletes and young sports professionals in training, as well as prevention. It will be useful for clinical cardiologists, sports physicians, and general physicians alike. Split into 11 key areas in sports cardiology, ranging from sudden cardiac death in athletes to the most common

cardiovascular abnormalities seen in athletes, and to the effects of substance abuse and doping, the text is an invaluable resource covering all aspects of sports cardiology. Access to the digital version of the textbook is included with purchase of the printed version. Highly illustrated with embedded multimedia features, together with cross-referenced links to related content and primary research data in major journals in the field, the digital version provides users with a dynamic and forward-thinking resource. The ESC Textbook of Sports Cardiology is the second textbook from the European Association of Preventive Cardiology (EAPC) and aligns with ESC clinical practice guidelines and EAPC recommendations and position papers.

International Perspectives on Spinal Cord Injury
- World Health Organization 2013

"Every year between 250 000 and 500 000 people suffer a spinal cord injury, with road traffic crashes, falls and violence as the three leading causes. People with spinal cord injury are two to five times more likely to die prematurely. They also have lower rates of school enrollment and economic participation than people without such injuries. Spinal cord injury has costly consequences for the individual and society, but it is preventable, survivable and need not preclude good health and social inclusion. Ensuring an adequate medical and rehabilitation response, followed by supportive services and accessible environments, can help minimize the disruption to people with spinal cord injury and their families. The aims of International perspectives on spinal cord injury are to: ---assemble and summarize information on spinal cord injury, in particular the epidemiology, services, interventions and policies that are relevant, together with the lived experience of people with spinal cord injury; ---

make recommendations for actions based on this evidence that are consistent with the aspirations for people with disabilities as expressed in the Convention on the Rights of Persons with Disabilities.
