TRIZ - The Theory of Inventive Problem Solving - Denis Cavallucci 2017-07-25

The work presented here is generally intended for engineers, educators at all levels, industrialists, managers, researchers and political representatives. Offering a snapshot of various types of research conducted within the field of TRIZ in France, it represents a unique resource. It has been two decades since the TRIZ theory originating in Russia spread across the world. Every continent adopted it in a different manner - sometimes by glorifying its potential and its perspectives (the American way); sometimes by viewing it with mistrust and suspicion (the European way); and sometimes by adopting it as-is, without questioning it further (the Asian way). However, none of these models of adoption truly succeeded. Today, an assessment of TRIZ practices in education, industry and research is necessary. TRIZ has expanded to many different scientific disciplines and has allowed young researchers to reexamine the state of research in their field. To this end, a call was sent out to all known francophone research laboratories producing regular research about TRIZ. Eleven of them agreed to send one or more of their postdoctoral researchers to present their work during a seminar,

regardless of the maturity or completeness of their efforts. It was followed by this book project, presenting one chapter for every current thesis in order to reveal the breadth, the richness and the perspectives that research about the TRIZ theory could offer our society. The topics dealt with e.g. the development of new methods inspired by TRIZ, educational practices, and measuring team impact.

DRM, a Design Research Methodology - Lucienne T.M. Blessing

2009-06-13

The initial motivator for the development of DRM, a Design Research Methodology, and the subsequent writing of this book was our frustration about the lack of a common terminology, benchmarked research methods, and above all, a common research methodology in design. A shared view of the goals and framework for doing design research was missing. Design is a multidisciplinary activity occurring in multiple application areas and involving multiple stakeholders. As a consequence, design research emerges in a variety of disciplines for a variety of applications with a variety of subjects. This makes it particularly difficult to review its literature, relate various pieces of work, find common ground, and validate and share results that are so essential for sustained progress in a research community. Above all, design research needs to be successful not only in an academic sense, but also in a practical sense. How could we help the community develop knowledge that is both academically and practically worthwhile? Each of us had our individual ideas of how this situation could be improved. Lucienne Blessing, while finishing her thesis that involved studying and improving the design process, developed valuable insights about the importance and relationship of empirical studies in developing and evaluating these improvements. Amaresh Chakrabarti, while finishing his thesis on developing and evaluating computational tools for improving products, had developed valuable insights about integrating and improving the processes of building and evaluating tools.

Evaluating Research Methods in Psychology - George Dunbar
2008-04-15

Using a series of over 40 case studies, this valuable text illustrates the processes and pitfalls involved in evaluating psychological research.

Invites students to consider whether the conclusion drawn at the end of each case is correct, or whether the results could have an alternative explanation. Cross-referencing between sections is made easy by page references that link the case studies and explanations. Cases reflect the range of research methods taught at undergraduate level and include qualitative research. Gives students an understanding of methodological problems. Equips students to critically evaluate published research. The author and publishers have made every effort to be fair to the authors of the research described in this book. Like all sciences, psychology is forged in the fire of criticism and refinement, and we hope that the original researchers will understand that any criticism is made with the utmost respect. If you are an author of one of the pieces of research mentioned in the book and would like to respond to the critique presented, please e-mail your comments to Andrew McAleer at Andrew.McAleer@oxon.blackwellpublishing.com.
