Springer Handbook of Nanomaterials - Robert Vajtai 2013-08-20

The Springer Handbook of Nanomaterials covers the description of materials which have dimension on the "nanoscale". The description of the nanomaterials in this Handbook follows the thorough but concise explanation of the synergy of structure, properties, processing and applications of the given material. The Handbook mainly describes materials in their solid phase; exceptions might be e.g. small sized liquid aerosols or gas bubbles in liquids. The materials are organized by their dimensionality. Zero dimensional structures collect clusters, nanoparticles and quantum dots, one dimensional are nanowires and nanotubes, while two dimensional are represented by thin films and surfaces. The chapters in these larger topics are written on a specific materials and dimensionality combination, e.g. ceramic nanowires. Chapters are authored by well-established and well-known scientists of the particular field. They have measurable part of publications and an important role in establishing new knowledge of the particular field.

Notes on the Pentateuch - Mackintosh, Charles

Another popular writer among the exclusives was an Irish schoolmaster, Charles Henry Mackintosh, who preached extensively in the revival movement. The initials 'C.H.M.' became familiar in many pious evangelical households of the later Victorian and Edwardian years. No critical scholar, Mackintosh nevertheless had a marked gift for simple Biblical exposition, and his works on the Pentateuch had an enormous vogue as simple aids to devotional interpretation for the first five books of the Bible. He was, however, no theologian, and certain isolated sentences in those books referred to 'the heavenly humanity' of Christ (and thus verged on formal heresy), brought him much hostile notice from prejudiced opponents of the Brethren (who took his writings as being far more significant and representative than they deserved). He later withdrew the expressions, on Darby's insistence.
