Action Research for Classrooms, Schools, and Communities - Meghan Manfra
2019-12-20

Action Research for Classrooms, Schools, and Communities is a core textbook for the action research course. This book addresses the trend toward high-stakes testing and teacher accountability by focusing on understanding student outcomes. With edTPA rapidly becoming part of the requirements for teacher certification, teacher preparation programs will increasingly be looking to measure the impact of the teacher candidate on student learning. The book focuses on the potential for action research to lead to greater understanding about student outcomes from the perspective of teachers, school leaders, and community members. There is a special emphasis on helping pre-service and experienced teachers use action research to understand their impact on student learning. There is an emphasis on using action research to understand community impacts on schools; unlike other books, this text acknowledges the complex ecology linking classrooms, schools, and the community, especially regarding issues

fundamental to school reform.

[Building Intelligent Interactive Tutors](#) - Beverly Park Woolf 2010-07-28

[Building Intelligent Interactive Tutors](#) discusses educational systems that assess a student's knowledge and are adaptive to a student's learning needs. The impact of computers has not been generally felt in education due to lack of hardware, teacher training, and sophisticated software. and because current instructional software is neither truly responsive to student needs nor flexible enough to emulate teaching. Dr. Woolf taps into 20 years of research on intelligent tutors to bring designers and developers a broad range of issues and methods that produce the best intelligent learning environments possible, whether for classroom or

life-long learning. The book describes multidisciplinary approaches to using computers for teaching, reports on research, development, and real-world experiences, and discusses intelligent tutors, web-based learning systems, adaptive learning systems, intelligent agents and intelligent multimedia. It is recommended for professionals, graduate students, and others in computer science and educational technology who are developing online tutoring systems to support e-learning, and who want to build intelligence into the system. Combines both theory and practice to offer most in-depth and up-to-date treatment of intelligent tutoring systems available Presents powerful drivers of virtual teaching systems, including cognitive science, artificial intelligence, and the Internet Features algorithmic material that enables programmers and researchers to design building components and intelligent systems

Embedding Questions - National Research Council 1999-12-17

Policy makers are caught between two powerful forces in relation to testing in America's schools. One is increased interest on the part of educators, reinforced by federal requirements, in developing tests that accurately reflect local educational standards and goals. The other is a strong push to gather information about the performance of students and schools relative to national and international standards and norms. The difficulty of achieving these two goals simultaneously is exacerbated by both the long-standing American tradition of local control of education and the growing public sentiment that students already take enough tests. Finding a solution to this dilemma has been the focus of numerous debates surrounding the Voluntary National Tests proposed by President Clinton in his 1997 State of the Union address. It was also

the topic of a congressionally mandated 1998 National Research Council report (Uncommon Measures: Equivalence and Linkage Among Educational Tests), and was touched upon in a U.S. General Accounting Office report (Student Testing: Issues Related to Voluntary National Mathematics and Reading Tests). More recently, Congress asked the National Research Council to determine the technical feasibility, validity, and reliability of embedding test items from the National Assessment of Educational Progress or other tests in state and district assessments in 4th-grade reading and 8th-grade mathematics for the purpose of developing a valid measure of student achievement within states and districts and in terms of national performance standards or scales. This report is the response to that congressional mandate.
