[The Economy](#) - Core Team 2017-09-21

The only introductory economics text to equip students to address today's pressing problems by mastering the conceptual and quantitative tools of contemporary economics. OUP has partnered with the international collaborative project of CORE researchers and teachers to bring students a book and learning system that complements and enhances CORE's open-access online e-book. The Economy is a new approach that integrates recent developments in economics including contract theory, strategic interaction, behavioural economics and financial instability. It challenges students to address inequality, climate change, economic instability, wealth creation and innovation and other problems. It has been adopted as the standard principles course at University College London, Sciences Po Paris and the Toulouse School of Economics. A new economics for the principles course The Economy begins with social interactions using elementary game theory and institutions modelled as rules of the game. This provides the basis for a modern treatment of markets including price-making as well as price-taking, the exercise of power, and the importance of social norms and adjustment to disequilibria. Introducing labour and credit markets with incomplete contracts allows a consistent treatment of aggregate employment and fluctuations without the need for ad hoc sticky price and wage assumptions. Banks create

money by extending credit and a central bank seeks to implement a target inflation rate. Growth and instability are illustrated from the Great Depression, through the post-war golden age of capitalism through to the financial crisis and ensuing uncertainties. Students acquire an understanding of the past and current evolution of the economy in its social and environmental context, equipping them to marshal evidence and articulate positions about contemporary policy issues.

Home Economics in the Elementary and Secondary Schools - Agnes Keith Hanna 1922

An International Perspective on Economic Education - William B. Walstad 1994-01-31
Economics is taught in some form in the secondary schools of nations throughout the world. The subject is rarely taught in elementary schools, and while economics courses are offered in universities, the majority of students end their formal education with secondary

school. Thus, the best opportunity for the economic education of the youth of a nation occurs in secondary schools. This book examines economic education at this critical level of the educational system. The teaching of economics in secondary schools varies across countries. These differences occur because of history, the structure of education, and other national factors. At the same time, there are common elements in the economic education of many countries, especially in content coverage. This contrast between the common features and the uniqueness of economic education in secondary schools of major industrial nations exemplifies the international perspective presented in this book. The international perspective is developed in the six sections of the volume. The first section discusses why nations should include economics in school curricula, and presents a framework for teaching economics that should have global appeal. Dissension and consensus on economic issues among North American and European economists are examined in the second section. The third section surveys the U.S. research literature on precollege economic education and assesses the current state of economics instruction in U.S. schools. The economics curricula and educational practices in seven other nations -- the U.K., Canada, Japan, Germany, Austria, Korea, and Australia -- are described in the fourth and fifth sections. The fifth section also presents international comparisons of economic understanding based on national testing in six of those nations. The sixth and final section explores the role of economic education in centrally planned economies, and its effects on the transition to a market economy, using Russia, Bulgaria, and China as case studies.

European Journal of Tourism Research - 2017-03-01

The European Journal of Tourism Research is an interdisciplinary scientific journal in the field of tourism, published by Varna University of Management, Bulgaria. Its aim is to provide a platform for discussion of theoretical and empirical problems in tourism. Publications from all fields, connected with tourism such as management, marketing, sociology, psychology, geography, political sciences, mathematics, statistics, anthropology, culture, information technologies and others are invited. The journal is open to all researchers. Young researchers and authors from Central and Eastern Europe are encouraged to submit their contributions. Regular Articles in the European Journal of Tourism Research should normally be between 4 000 and 20 000 words. Major research articles of between 10 000 and 20 000 are highly welcome. Longer or shorter papers will also be considered. The journal publishes also Research

Notes of 1 500 - 2 000 words. Submitted papers must combine theoretical concepts with practical applications or empirical testing. The European Journal of Tourism Research includes also the following sections: Book Reviews, announcements for Conferences and Seminars, abstracts of successfully defended Doctoral Dissertations in Tourism, case studies of Tourism Best Practices. The European Journal of Tourism Research is published in three Volumes per year. The full text of the European Journal of Tourism Research is available in the following databases: EBSCO Hospitality and Tourism CompleteCABI Leisure, Recreation and TourismProQuest Research Library Individual articles can be rented via journal's page at DeepDyve. The journal is indexed in Scopus and Thomson Reuters' Emerging Sources Citation Index. The editorial team welcomes your submissions to the European Journal of Tourism Research.
