The Case of the Frozen Addicts - J.W. Langston 2013-12-02

In the summer of 1982, hospital emergency rooms in the San Francisco Bay Area were suddenly confronted with mysteriously “frozen” patients – young men and women who, though conscious, could neither move nor speak. Doctors were baffled, until neurologist J. William Langston, recognizing the symptoms of advanced Parkinson’s disease, administered L-dopa – the only known effective treatment – and “unfroze” his patient. Dr. Langston determined that this patient and five others had all used the same tainted batch of synthetic heroin, inadvertently laced with a toxin that had destroyed an area of their brains essential to normal movement. This same area, the substantia nigra, slowly deteriorates in Parkinson’s disease. As scientists raced to capitalize on this breakthrough, Dr. Langston struggled to salvage the lives of his frozen patients, for whom L-dopa provided only short-term relief. The solution he found lay in the most daring area of research: fetal-tissue transplants. The astonishing recovery of two of his patients garnered worldwide press coverage, helped overturn federal restrictions on fetal-tissue research, and offered hope to millions suffering from Parkinson’s, Alzheimer’s, and other degenerative brain disorders. This is the story behind the headline – a spellbinding account that brings to life the intellectual excitement, ethical dilemmas, and fierce competitiveness of medical research. This new updated edition of the classic neurological mystery tale, “The Case of the Frozen Addicts,” illuminates how the solution to a baffling mystery of the brain’s chemistry opened a new frontier in medicine and restored life to people without hope. “It begins with a series of quixotic discoveries, escalates to providing possible solutions for one of humanity’s most intractable medical problems, and then catapults the reader into the center of America’s hottest political arena – abortion and fetal sanctity. Bravo! A brilliant read.” – Laurie Garrett, author of *The Coming Plague*

“[Langston and Palfreman] weave a highly readable and spellbinding medical detective tale... It is as absorbing as a good mystery, as entertaining as an exciting novel, and as enlightening as a good biography.” – Stanley Fahn, *New England Journal of Medicine* “I could not put it down... it is the lives of the ‘frozen addicts’ themselves – and the fullness with which this is presented – which makes the whole thing overwhelming.” – Oliver Sacks

Leprosy - Enrico Nunzi 2012-04-27

Leprosy (Hansen’s disease) is an infectious disease caused by *Mycobacterium leprae*. It is one of the most disabling disorders in developing countries, with a peak incidence in the tropics and subtropics. With globalization, leprosy is now increasingly spreading to the western world. The impact of this infectious disorder is relevant for the human community due to its transmissible nature, and also important for the individual because of its debilitating consequences. Leprosy is a multifaceted systemic disease with variable presentation and clinical picture. Its identification may therefore not be straightforward, especially outside endemic areas. During its chronic course, leprosy is characterized by acute phases during which there may be exacerbation of symptoms and rapid progression of damage. When leprosy affects the eyes, nerves, and kidneys, it can represent a true medical emergency. The aim of this book is to make the reader familiar with the characteristic signs of disease, including abnormalities of the skin, nerves, eyes, hands, feet, testes, and bone. Early identification of the disease is critical to prevent patient disability and establish appropriate therapy. Emphasis will be given to the current diagnostic tools to identify and quantify the organ damage, including electrophysiology, ultrasonography, magnetic resonance imaging, laboratory tests, and histopathology. Specific topics such as leprosy and pregnancy, leprosy and HIV infection, epidemiology, and leprosy control will also be covered.

Guía de medicamentos de alto riesgo en Pediatría y Neonatología - Cotrina Luque, Jesús 2015-01-01

Muchos fármacos utilizados en niños o no están autorizados o están siendo prescritos fuera de las indicaciones aprobadas. Esto representa un riesgo adicional de errores de medicación, puesto que las dosis deben calcularse de modo individual, a menudo sin información sobre la dosificación adecuada por parte del laboratorio fabricante o las agencias reguladoras. Además, las formulaciones de adultos han de ser manipuladas con frecuencia por el personal de enfermería. Esto sumado a la falta de información sobre la compatibilidad y estabilidad de estos compuestos resulta en un elevado riesgo de que se produzcan errores. Nace así este manual de formación y consulta. En su elaboración han trabajado profesionales de diferentes disciplinas como la pediatría, la enfermería pediátrica o la farmacia por lo que es probable que se haya alcanzado una visión multidisciplinar. Se pretende que pueda ser útil en sí mismo y como herramienta para realizar intervenciones multidisciplinarias de formación en seguridad. Se ha construido como una sucesión de fichas de una lista de medicamentos que se han considerado de riesgo en pediatría y para los cuales se incluyen datos útiles desde la perspectiva de la prevención de errores.

Nerve and Vascular Injuries in Sports Medicine - Venu Akuthota 2009-05-28

The field of sports medicine covers a tremendous territory. Athletes present to their physician with everything from sprained ankles to bowel problems while running. Many of the classic textbooks in sports medicine cover many of these issues in a cursory way. Two major organ systems that account for many injuries in athletes are the nervous system and the vascular system. Because of their widespread, diffuse nature, athletes can present with myriad signs and symptoms related to these systems. Drs. Akuthota and Herring have done an outstanding job in their textbook *Nerve and Vascular Injuries in Sports Medicine* to produce a commonsense, yet thorough, approach to potential nerve and vascular injuries in athletes. The text provides any physician or clinician who evaluates and treats athletes with a clear path to an appropriate history, physical examination, imaging studies, and electrophysiologic and vascular

examinations of any athlete with potential nerve or vascular injuries. The first third of the book describes the appropriate evaluation of athletes with nerve and vascular symptoms and signs. Emphasis is placed on kinetic chain contributions to nerve and vascular injuries to address not only the cause of the injury but possible associated, contributing biomechanical deficiencies. The last two-thirds of the book cover regional specific nerve and vascular injuries with special attention to stingers, thoracic outlet syndrome, lumbar radiculopathy, and compartment syndromes.

Guía Clínica SoHAH | la curiosa historia de la anatomía y cirugía en el cadáver - Alfredo Moreno Egea 2022-05-01

La historia de la Anatomía y parcialmente la de la Cirugía, está formada por una multitud de biografías todas ellas entrelazadas de diversas maneras, pero con un nexo de unión común: la búsqueda del conocimiento del cuerpo humano. Entendida así, la historia de la anatomía no es otra cosa que una parte de la propia historia de la humanidad. Debo reconocer que es imposible incluir en este libro a todos aquellos personajes que la hicieron posible, pero mi objetivo es incluir a todos aquellos que han participado de una Anatomía o Cirugía practicada directamente sobre el cadáver, intentando destacar a muchos de ellos que han sido maltratados por la historia, relegados o incluso olvidados por diversos motivos que a día de hoy solo la historia de su tiempo conoce. No puedo decir pues, que esta historia mía sea completa, eso sería imposible, solo he podido incluir a aquellos personajes sobre los que se dispone de documentación previa, pero les advierto que no he dejado fuera a ninguno que aparezca hasta en un pequeño manual o publicación, teniendo siempre una especial atención con los personajes españoles que han sido tan injustamente tratados por otros autores.

Knowledge Translation in Health Care - Ian D. Graham 2011-08-24

Health care systems worldwide are faced with the challenge of improving the quality of care. Providing evidence from health research is necessary but not sufficient for the provision of optimal care and so knowledge translation (KT), the scientific study of methods for closing the knowledge-to-action gap and of the barriers and facilitators inherent in the process, is gaining significance. Knowledge Translation in Health Care explains how to use research findings to improve health care in real life, everyday situations. The authors define and describe knowledge translation, and outline strategies for successful knowledge translation in practice and policy making. The book is full of examples of how knowledge translation models work in closing the gap between evidence and action. Written by a team of authors closely involved in the development of knowledge translation this unique book aims to extend understanding and implementation worldwide. It is an introductory guide to an emerging hot topic in evidence-based care and essential for health policy makers, researchers, managers, clinicians and trainees.

Road Traffic Injury Prevention Training Manual - Dinesh Mohan 2006

Road traffic collisions kill about 1.2 million people around the world every year but they are largely neglected as a health and development issue, perhaps because they are still viewed by many as being beyond human control. Efforts to prevent road traffic injuries are hampered by a lack of human capacity. Policy-makers, researchers and practitioners need information on effective prevention measure and on how to develop, implement and evaluate such interventions. There is a need to train more specialists in road traffic injury prevention in order to address the growing problem of road traffic injuries at international levels.

Mini Nutritional Assessment (MNA) - Bruno J. Vellas 1999

This book is the first of a new series which will present the proceedings of the newly established Nestlé Nutrition Workshop Series: Clinical & Performance Programme aimed at adult nutrition. Undernutrition is a common phenomenon in elderly people, and malnutrition reaches significant levels in those being in hospital, nursing homes or home care programs. Consequences of malnutrition often go unrecognised owing to the lack of specific validated instruments to assess nutritional status in frail elderly persons. The Mini Nutritional Assessment (MNA) provides a single, rapid assessment of nutritional status in the elderly of different degrees of independence, allowing the prevalence of protein-energy malnutrition to be determined and to evaluate the efficacy of nutritional intervention and strategies. Easy, quick and economical to perform, it enables staff to check the nutritional status of elderly people when they enter hospitals or institutions and to monitor changes occurring during their stay. Moreover, the MNA is predictive of the cost of care and length of stay in hospital. This publication will be of immense assistance to heads of geriatric teaching units, teachers in nutrition, clinicians general practitioners and dieticians, enabling them to better detect, recognise and start treatment of malnutrition in the elderly.

Pressure Ulcer Risk Assessment and Prevention: Comparative Effectiveness - U. S. Department of Health and Human Services 2013-06-29

Pressure ulcers are defined by the National Pressure Ulcer Advisory Panel (NPUAP) as "localized injury to the skin and/or underlying tissue usually over a bony prominence, as a result of pressure, or pressure in

combination with shear and/or friction.” A number of risk factors are associated with increased risk of pressure ulcer development, including older age, black race, lower body weight, physical or cognitive impairment, poor nutritional status, incontinence, and specific medical comorbidities that affect circulation such as diabetes or peripheral vascular disease. Pressure ulcers are often associated with pain and can contribute to decreased function or lead to complications such as infection. In some cases, pressure ulcers may be difficult to successfully treat despite surgical and other invasive treatments. In the inpatient setting, pressure ulcers are associated with increased length of hospitalization and delayed return to function. In addition, the presence of pressure ulcers is associated with poorer general prognosis and may contribute to mortality risk. Recommended prevention strategies for pressure ulcers generally involve use of risk assessment tools to identify people at higher risk for developing ulcers in conjunction with interventions for preventing ulcers. A variety of diverse interventions are available for the prevention of pressure ulcers. Categories of preventive interventions include support surfaces (including mattresses, integrated bed systems, overlays, and cushions), repositioning, skin care (including lotions, dressings, and management of incontinence), and nutritional support. Each of these broad categories encompasses a variety of interventions. The purpose of this report is to review the comparative clinical utility and diagnostic accuracy of risk-assessment instruments for evaluating risk of pressure ulcers and to evaluate the benefits and harms of preventive interventions for pressure ulcers in different settings and patient populations. The following Key Questions are the focus of this report: KQ1. For adults in various settings, is the use of any risk-assessment tool effective in reducing the incidence or severity of pressure ulcers compared with other risk-assessment tools, clinical judgment alone, and/or usual care? KQ1a. Do the effectiveness and comparative effectiveness of risk-assessment tools differ according to setting? KQ1b. Do the effectiveness and comparative effectiveness of risk-assessment tools differ according to patient characteristics and other known risk factors for pressure ulcers, such as nutritional status or incontinence? KQ2. How do various risk-assessment tools compare with one another in their ability to predict the incidence of pressure ulcers? KQ2a. Does the predictive validity of various risk-assessment tools differ according to setting? KQ2b. Does the predictive validity of various risk-assessment tools differ according to patient characteristics? KQ3. In patients at increased risk of developing pressure ulcers, what are the effectiveness and comparative effectiveness of preventive interventions in reducing the incidence or severity of pressure ulcers? KQ3a. Do the effectiveness and comparative effectiveness of preventive interventions differ according to risk level as determined by different risk-assessment methods and/or by particular risk factors? KQ3b. Do the effectiveness and comparative effectiveness of preventive interventions differ according to setting? KQ3c. Do the effectiveness and comparative effectiveness of preventive interventions differ according to patient characteristics? KQ4. What are the harms of interventions for the prevention of pressure ulcers? KQ4a. Do the harms of preventive interventions differ according to the type of intervention? KQ4b. Do the harms of

preventive interventions differ according to setting? KQ4c. Do the harms of preventive interventions differ according to patient characteristics?

Manual of Neonatal Care - John P. Cloherty 2012-01-05

This edition of the Manual of Neonatal Care has been completely updated and extensively revised to reflect the changes in fetal, perinatal, and neonatal care that have occurred since the sixth edition. This portable text covers current and practical approaches to evaluation and management of conditions encountered in the fetus and the newborn, as practiced in high volume clinical services that include contemporary prenatal and postnatal care of infants with routine, as well as complex medical and surgical problems. Written by expert authors from the Harvard Program in Neonatology and other major neonatology programs across the United States, the manual's outline format gives readers rapid access to large amounts of valuable information quickly. The Children's Hospital Boston Neonatology Program at Harvard has grown to include 57 attending neonatologists and 18 fellows who care for more than 28,000 newborns delivered annually. The book also includes the popular appendices on topics such as common NICU medication guidelines, the effects of maternal drugs on the fetus, and the use of maternal medications during lactation. Plus, there are intubation/sedation guidelines and a guide to neonatal resuscitation on the inside covers that provide crucial information in a quick and easy format.
