A National Trauma Care System - National Academies of Sciences, Engineering, and Medicine 2016-10-12
Advances in trauma care have accelerated over the past decade, spurred by the significant burden of injury from the wars in Afghanistan and Iraq. Between 2005 and 2013, the case fatality rate for United States service members injured in Afghanistan decreased by nearly 50 percent, despite an increase in the severity of injury among U.S. troops during the same period of time. But as the war in Afghanistan ends, knowledge and advances in trauma care developed by the Department of Defense (DoD) over the past decade from experiences in Afghanistan and Iraq may be lost. This would have implications for the quality of trauma care both within the DoD and in the civilian setting, where adoption of military advances in trauma care has become increasingly common and necessary to improve the response to multiple civilian casualty events. Intentional steps to codify and harvest the lessons learned within the military's trauma system are needed to ensure a ready military medical force for future combat and to prevent death from survivable injuries in both military and civilian systems. This will require partnership across military and civilian sectors and a sustained commitment from trauma system leaders at all levels to assure that the necessary knowledge and tools are not lost. A National Trauma Care System defines the components of a learning health system necessary to enable continued improvement in trauma care in both the civilian and the military sectors. This report provides recommendations to ensure that lessons learned over the past decade from the military's experiences in Afghanistan and Iraq are sustained and built upon for future combat operations and translated into the U.S. civilian system.

AACN Advanced Critical Care Nursing - E-Book Version to be sold via e-commerce site - AACN 2008-06-05

From AACN experts comes a resource dedicated to helping you oversee or care for critical care patients in any practice setting. This comprehensive critical care nursing textbook addresses serious and potentially life-threatening patient conditions with a foundation rooted in the critical thinking process: the comprehension, analysis, synthesis, and application of knowledge. Endorsed by the American Association of Critical-Care Nurses (AACN), the largest specialty nursing organization in the United States, for the most authoritative coverage available. Thorough discussions of each body system emphasize advanced concepts, presenting physiology in an application format that examines the clinical implications of physiological science. Coverage of assessment focuses on interpreting abnormal findings and linking those findings to diagnosis and intervention. Appropriate interventions are discussed from an interdisciplinary, evidence-based perspective. Hundreds of new, full-color illustrations and design clarify important concepts and improve the book's usability. Complex, unfolding case studies are presented in all disease chapters, accompanied by review questions with a comprehensive answer key. Multidisciplinary Plans of Care provide at-a-glance information for common ICU conditions. Nutrition boxes appear in each relevant chapter, offering guidelines for patient needs with specific illnesses. Research-Based Practice Guidelines boxes and Promoting Evidence-Based Practice features appear throughout the text whenever applicable to present the latest research-supported nursing assessment and intervention practices. Drug boxes include common classifications of critical care drugs for specific disorders, including drug, actions, dosage, and special considerations. Applying the Technology features help you apply the latest technology to patient

care. NIC Interventions boxes list NIC intervention labels appropriate for the conditions discussed in a chapter.

Local Planning for Terror and Disaster - Leonard A. Cole 2012-08-06

Local Planning for Terror and Disaster gives voice to experts in key fields involved with local preparedness, assessing the quality of preparedness in each field, and offering directions for improvement. Introductory chapters provide overviews of terror medicine, security and communications, which are indispensable to successful preparedness, while subsequent chapters concentrate on a particular field and how responders from that field communicate and interact with others during and after an event. Thus, a chapter by a physician discusses not only the doctor's role but how that role is, or should be, coordinated with emergency medical technicians and police. Similarly, chapters by law enforcement figures also review police responsibilities and interactions with nurses, EMTs, volunteers and other relevant responders. Developed from topics at recent Symposia on Terror Medicine and Security, Local Planning also encompasses aspects of emergency and disaster medicine, as well as techniques for diagnosis, rescue, coordination and security that are distinctive to a terrorist attack. Each chapter also includes a case study that demonstrates preparedness, or lack thereof, for a real or hypothetical event, including lessons learned, next steps, and areas for improvement in this global era which increasingly calls for preparedness at a local level.

Principles and Practice of Trauma Nursing - Rose Ann O'Shea 2005-01-01

This unique, authoritative book explores the spectrum of trauma care provided in the UK, discussing procedures for specific trauma presentations as well as the nurse's role in providing care in the emergency setting. Chapters on the relevant biosciences are included, which serve as an excellent source of review or instruction for nurses of all levels. In addition to the basic science dimensions of trauma nursing, the book also addresses clinical, psychosocial, and psychological aspects of care. Its structured approach to patient management presents information in an easy-to-follow format. Research evidence is used throughout to support the text, laying the foundation for expert nursing practice. Multidisciplinary approach makes the book relevant to current practice. Key learning points are highlighted with the text to help direct the reader's attention and encourage learning. A wide range of expert contributors makes the book a credible and authoritative source. Easy-to-understand chapters on fundamental biosciences expand readers' knowledge. Extensive illustrations, line drawings, and easy-to-read tables provide clear, visual explanations of important material. Appropriate references and recommended sources for further reading help readers develop knowledge and insight. Structured textbook format facilitates learning, enables information to be found quickly, and makes the book more user-friendly. The section on pre-hospital care presents a key piece of the trauma care spectrum, rather than focusing solely on the nurse's role in in-hospital care.

Emergency and Trauma Care for Nurses and Paramedics - Kate Curtis 2015-10-16

The Influence of Psychological Trauma in Nursing - Karen J. Foli 2019-06-17

As nurses know firsthand, the impact of psychological trauma is not limited to those who experience it. Others—including nurses and caregivers—are indirectly affected. In healthcare, patients' psychological trauma may manifest in odd, uncomfortable, or confusing behaviors. Nurses and healthcare workers must recognize that patients may be feeling unsafe or struggling with low self-esteem, anxiety, grief, loneliness, or depression born from trauma. As nurses listen to, empathize with, and sometimes grieve with the people they care for, they need to comprehend the "why" behind these feelings and actions. *The Influence of Psychological Trauma in Nursing* helps nurses gain awareness and knowledge about trauma and recovery so they can heal and bring holistic healing to others. Authors Karen J. Foli and John R. Thompson provide a primer on psychological trauma, helping readers identify and understand the common forms of trauma in society. Filled with examples, tools, assessments, and learning objectives, this book helps nurses move forward as trauma-informed caregivers.

Rural Emergency Medical Services - Maria Elizabeth Hewitt 1989

Pediatric Trauma Care II - AHC Media, LLC 2014-03-17

Pediatric trauma continues to have a significant impact on the health and well-being of children in the United States. Trauma continues to be the leading cause of death in children 1 to 18 years of age and accounted for more than 14,000 deaths among all children 0 to 18 years of age. In 2008, there were more than 8.6 million nonfatal injuries among newborn to 18-year-olds, with an injury rate of greater than 1 in 10. There is little debate that a coordinated effort and pediatric-specific advances in pediatric trauma systems, prehospital care and hospital care, and injury prevention can have a positive impact on pediatric trauma outcomes in the United States. However, there are still gaps in access to centers that deliver pediatric-focused trauma care, especially in rural areas. Furthermore, there are differing views between different centers regarding the optimal approach to the initial evaluation and management of the pediatric trauma patient. This book is targeted to review critical aspects of the care of the pediatric trauma patient, highlighting the most common and critical injuries encountered in the acute care setting.

Drain's PeriAnesthesia Nursing - E-Book - Jan Odom-Forren 2012-05-14

Drain's Perianesthesia Nursing: A Critical Care Approach, 6th Edition is the most comprehensive book on the market specifically tailored to perianesthesia nurses. The book features five distinct sections - the PACU, anatomy and physiology, pharmacology, nursing care, and special considerations. Nursing and pharmacologic interventions are integrated with in-depth coverage of pathophysiology. This edition expands coverage of evidence based research and adds a new chapter on care of the obese patient undergoing bariatric surgery. Written by Jan Odom-Forren, an expert in the anesthesia and post-operative fields, Drain's Perianesthesia Nursing is also an excellent study tool for ASPAN certification. Five separate sections provide coverage including the PACU, anatomy and physiology, pharmacology, nursing care, and special considerations. An overview of essential PACU concepts section covers issues such as patient safety, evidence-based research, and legal/ethical considerations Anatomy and physiology chapters cover physiologic considerations for each body system Pharmacology chapters cover basic principles as well as types of anesthetic agents such as intravenous anesthetics and regional anesthesia, including the physiology of action and the appropriate nursing interventions to prepare you for common situations in the PACU. Nursing care chapters cover assessment, patient education, complications, pain management, and care of specialty-surgery patients. A section on special considerations covers the care of patients of different ages and those with conditions such as malignant hyperthermia, substance abuse, and cardiac arrest. Coverage of current policies and issues affecting perianesthesia nursing practice includes patient safety, infection control, managed care implications, pain management, and bioterrorism. Nursing and pharmacologic interventions are integrated with in-depth coverage of pathophysiology for a comprehensive look at disease and treatment. NEW Evidence Based Research boxes are added to all the chapters in Section IV and Section V. NEW! Care of the Obese Patient Undergoing Bariatric Surgery chapter discusses the challenges that weight-loss surgery presents to the patient and perianesthesia nurse. Streamlined format includes an overview, chapter summary, and references for each chapter. More than 275 illustrations show key concepts and principles of care. Updated The Changing Health Care System and Its Implications for the PACU chapter includes content on healthcare reform. Revised Patient Safety and Legal Issues in the PACU chapter includes content on patient safety. Expanded Evidence-based Practice and Research and Bioterrorism and Its Impact on the PACU chapters include coverage of new developments and practices.

JOINT TRAUMA SYSTEM DEVELOPMENT, CONCEPTUAL FRAMEWORK, AND OPTIMAL ELEMENTS 6. The United States Military Joint Trauma System Assessment: A Report Commissioned by the US Central Command Surgeon Sponsored by Air Force Central Command A Strategic Document to Provide a Platform for Tactical Development (2018)

INTRODUCTION This current set of medical guidelines has gone through some significant improvements since the original release in 2014 and were developed through a collaboration of Emergency Medicine professionals, experienced Flight Medics, Aeromedical Physician Assistants, Critical Care Nurses, and Flight Surgeons. There has been close coordination in the development of these guidelines by the Joint Trauma System, Committee of En Route Combat Casualty Care and the Committee of Tactical Combat Casualty Care. Our shared goal is to ensure excellent en route care that is standard across all evacuation and emergency medical pre-hospital units. It is our vision that all of these enhancements and improvements will advance en route care across the services and the Department of Defense. The CCFP Program Office facilitates appropriate training and medical education to the CCFP providers. The CCFP program of instruction ensures the appropriate skills and knowledge required for CCFPs to apply these medical guidelines during aeromedical evacuation. Unit medical trainers and medical directors should evaluate CCFPs ability to follow and execute the medical instructions herein. These medical guidelines are intended to guide Critical Care Flight Paramedics (CCFP) and prehospital professionals in the response and management of emergencies and the care and treatment of patients in both garrison and theater of war environments. Unit medical providers are not expected to employ these guidelines blindly. Unit medical providers are expected to manipulate and adjust these guidelines to their unit's mission and medical air crew training / experience. Medical directors or designated supervising physicians should endorse these guidelines as a baseline, appropriately adjust components as needed, and responsibly manage individual unit medical missions within the scope of practice of their Critical Care Flight Paramedics, Enroute Critical Care Nurses, and advanced practice aeromedical providers.

A National Trauma Care System - National Academies of Sciences, Engineering, and Medicine 2016-09-12

Advances in trauma care have accelerated over the past decade, spurred by the significant burden of injury

from the wars in Afghanistan and Iraq. Between 2005 and 2013, the case fatality rate for United States service members injured in Afghanistan decreased by nearly 50 percent, despite an increase in the severity of injury among U.S. troops during the same period of time. But as the war in Afghanistan ends, knowledge and advances in trauma care developed by the Department of Defense (DoD) over the past decade from experiences in Afghanistan and Iraq may be lost. This would have implications for the quality of trauma care both within the DoD and in the civilian setting, where adoption of military advances in trauma care has become increasingly common and necessary to improve the response to multiple civilian casualty events. Intentional steps to codify and harvest the lessons learned within the military's trauma system are needed to ensure a ready military medical force for future combat and to prevent death from survivable injuries in both military and civilian systems. This will require partnership across military and civilian sectors and a sustained commitment from trauma system leaders at all levels to assure that the necessary knowledge and tools are not lost. A National Trauma Care System defines the components of a learning health system necessary to enable continued improvement in trauma care in both the civilian and the military sectors. This report provides recommendations to ensure that lessons learned over the past decade from the military's experiences in Afghanistan and Iraq are sustained and built upon for future combat operations and translated into the U.S. civilian system.

Trauma Surgery - S. Di Saverio 2013-12-13

Trauma surgery has increasingly become a specialized field inspired by different principles and philosophy. A good trauma surgeon is a surgeon who knows how to perform abdominal vascular, thoracic, urologic, gynecologic, and orthopaedic procedures and is able to repair multiple traumatic injuries in the best sequence possible. In this first volume, practical, up-to-date guidance is provided on the optimal critical care and ICU management of trauma patients. In addition, individual chapters focus on specific injuries in orthopaedic trauma (and especially spinal trauma) and neurotrauma, with the aim of providing a fresh view of the surgical approach and practical suggestions for improving the skills of treating surgeons. Educational issues and the organization of a trauma center are also covered. The volume will be a handy pocket guide for trainee surgeons and any surgeon, physician, or nurse who treats trauma patients. It will be particularly relevant for emergency department physicians, critical care and ICU doctors, orthopaedic surgeons, neurosurgeons, and professionals responsible for trauma care and decision making, programs of trauma education, or organization of a trauma center. Also available: *Trauma Surgery Vol. 2: Thoracic and Abdominal Trauma*

Introduction to Critical Care Nursing - Mary Lou Sole 2013-12-27

Here's the essential information you need to know in critical care nursing — all in one concise text! Using a to-the-point, reader friendly approach, *Introduction to Critical Care Nursing, 5th Edition*, provides authoritative, real-world information on the important concepts of critical care nursing and the assessment and technical skills associated with the management of critically ill patients. The latest content on the technology makes it easy to learn and understand how to use the equipment you'll use in the field. Nursing care chapters are organized according to the nursing process framework, and you'll find detailed nursing care plans in every management chapter. Case studies and critical thinking questions challenge you to apply what you've learned, and user-friendly features throughout the text (updated pharmacology tables, clinical and laboratory alerts, and evidence-based practice boxes) help you bridge the gap between concepts and clinical practice. Nursing Care Plans provide nursing diagnoses, expected patient outcomes, and interventions with rationales to prepare you for clinical practice. Case Studies challenge you to apply concepts from the book to real-life patient situations to test their critical thinking skills. Streamlined and updated Pharmacology Tables detail the actions, indications, dosages and routes, and side effects of commonly used critical care drugs. Clinical Alerts promote optimal patient safety and outcomes by highlighting potential problems and concerns in the clinical setting. Laboratory Alerts discuss both common and cutting-edge tests and procedures, emphasizing the importance of laboratory test results to critical nursing care. Critical Thinking Questions in every chapter encourage you to use and reinforce the concepts presented throughout the chapter. Now full-color throughout, new, vibrant artwork and anatomical images are in true-to-life color. A new chapter on end-of-life care covers ethical and legal matters, palliative care, withholding of therapies, and communication issues — all essential concerns confronting today's critical care nurse. New features on evidence-based practice, genetics, transplantation, and geriatric considerations offer realistic, easy-to-understand information on some of the most important and rapidly changing topics in critical care today.
