Perinatal Psychopharmacology - Faruk Uguz 2019-01-24

This book focuses on recent advances in research and practical recommendations regarding the use of psychotropic drugs during pregnancy and lactation, two important social and psychological life events for women. In addition to the social context, including the addition of a new family member, many women experience the occurrence or recurrence of psychiatric disorders during the perinatal period. Psychiatric disorders during this period can have negative effects on the fetus, infant and other children in the family, and can result in functional impairment among mothers. The book offers a comprehensive overview of psychopharmacological treatments for nearly all specific psychiatric conditions (e.g. bipolar disorder, panic disorder, obsessive-compulsive disorder) and includes chapters on clinical approaches to treating these disorders. As such, it will appeal to a wide readership, including psychiatrists, obstetricians, gynecologists and pediatricians.

Complex Social Issues and the Perinatal Woman - Laura Abbott 2021-08-27

Pursuing a multidisciplinary approach, this book demonstrates the best quality care for pregnant women and new mothers who may have complex social needs. This book will benefit all health and social care professionals working in women's health, while also providing a valuable reference guide for maternity departments. The latest Mothers and Babies: Reducing Risk through Audits and Confidential Enquiries across the UK (MBRRACE-UK) demonstrates the consequences that having multiple complexities has and the need to ensure that susceptible groups receive personalised, appropriate care and meeting the needs of all women is urgent and essential. This book brings together a blend of health and social care professionals, experts by experience and the charity third sector. All have expertise in caring for and supporting perinatal women with issues that may affect their health and the type of care they require. Through our collective writing, we provide a paradigm for partnership working and hope to have strengthened voices by highlighting women's experiences and the importance of third sector partnerships, working in tandem with women who are experts by experiences and bringing health professionals together. In combination with recommendations from specialists in the field, we have offered a unique mix of compassion and evidence-based guidance. From substance abuse, domestic violence and HIV to experiences of Black, Asian and Ethnic Minorities, homelessness, women seeking asylum and women in prison, we have addressed a range of current issues and provided essential information and opportunities to reflect. Each chapter invites the reader to step into the shoes of the perinatal woman. Through our collective writing, we provide a paradigm for partnership working and hope to have strengthened voices by highlighting diverse experiences. We have looked at how using a

trauma informed approach can be applied universally to care for all women and learn from charities such as Birth Companions, the 4M project and the Salamander Trust, how different approaches may directly impact women's care in a positive and holistic way. An overarching aim of our book has been to find ways to deliver multi-agency continuity of care, whilst being aware of bias, professional responsibilities and an understanding how we can take a holistic approach - crucial for attaining excellence in 21st century maternity care provision.

Breastfeeding and Medication - Wendy Jones 2018-05-11

Sadly, women often feel they have no alternative but to give up breastfeeding, having been prescribed or purchased medication. In many cases, however, this is unnecessary. This book outlines the evidence base for the use of medication during breastfeeding. *Breastfeeding and Medication* presents a comprehensive A to Z guide to the most frequently prescribed drugs and their safety for breastfeeding mothers. Evaluating the evidence for interventions and using a simple format for quickly identifying medications that are safe or unsafe to use, it also highlights those drugs where there is inconclusive evidence. Additional contextual information makes this the most complete text

for those practitioners who support and treat breastfeeding women. It: provides an overview of the anatomy and physiology of the breast together with hormonal influences to better understand how complications, such as mastitis, arise and inform the approach to their treatment; includes a section on conditions that affect women specifically when they are lactating where prescription of medication may be necessary; discusses the importance of breastfeeding and its advantages, as well as its disadvantages; and explores how to support breastfeeding mothers, and presents a counselling model approach. This new edition contains information on more drugs and a chapter on the management of some chronic conditions which may affect breastfeeding mothers. In most cases there are options to support the mother's optimal care whilst allowing her to continue to breastfeed her baby as long as she wishes. This is a topic which raises many questions on social media, which informed the choice of conditions to consider. This is an invaluable reference for all health practitioners and volunteers who work with, support and treat breastfeeding women, including lactation consultants, breastfeeding support workers, health visitors, GPs, practice nurses, pharmacists and midwives.

Guidelines for the Identification and Management of Substance Use and Substance Use Disorders in Pregnancy -

World Health Organization 2015-04-20

These guidelines have been developed to enable professionals to assist women who are pregnant, or have recently had a child, and who use alcohol or drugs or who have a substance use disorder, to achieve healthy outcomes for themselves and their fetus or infant. They have been developed in response to requests from organizations, institutions and individuals for technical guidance on the identification and management of alcohol, and other substance use and substance use disorders in pregnant women. They were developed in tandem with the WHO recommendations for the prevention and management of tobacco use and second-hand smoke exposure in pregnancy.

Nutrition During Pregnancy and Lactation -
Leanne M. Redman 2020-01-03

Pregnancy is viewed as a window to future health. With the birth of the developmental origins of human adult disease hypothesis, research and clinical practice has turned its attention to the influence of maternal factors such as health and lifestyle surrounding pregnancy as a means to understand and prevent the inter-generational inheritance of chronic disease susceptibility. Outcomes during pregnancy have long-lasting impacts on both women on children. Moreover, nutrition early in life can influence growth and the establishment of lifelong eating habits and behaviors. This Special Issue on "Nutrition during Pregnancy and Lactation: Implications for Maternal and

Infant Health” is intended to highlight new epidemiological, mechanistic and interventional studies that investigate maternal nutrition around the pregnancy period on maternal and infant outcomes. Submissions may include original research, narrative reviews, and systematic reviews and meta-analyses.

Fundamentals of Pharmacology for Children's Nurses - Ian Peate 2021-12-01

Registered Nurses must have thorough knowledge of pharmacology, medicines administration, and the effects of medicines. Fundamentals of Pharmacology for Children's Nurses is written for nurses and allied health professionals involved in the care of children and young people (CYP) to focus exclusively on pharmacology. Filling a gap in current literature on the subject, this much-needed resource develops the competence and confidence required to prescribe, dispense, and administer medicines to children and young people.

A Guide to Supporting Breastfeeding for the Medical Profession - Amy Brown 2019-12-05
This book is a practical guide for medical practitioners as they navigate through breastfeeding problems that occur in day-to-day practice. If mothers have a breastfeeding complication they are often directed to their GP. In complex situations, medical staff will be making decisions around what treatment plan to

follow and whether a mother can keep breastfeeding. In recent years there has been growing evidence that medical professionals often advise mothers to stop breastfeeding while undergoing treatment, when in reality this was not a necessary step. In a time when breastfeeding rates are decreasing, it is important that medical professionals give accurate advice and support a mother's choice to breastfeed if the situation allows it. A Guide to Supporting Breastfeeding for the Medical Profession includes contributions from a wide range of medical professionals and each chapter is written with the practitioner in mind. Contributors include GPs, paediatricians, neonatologists, lactation specialists and midwives. Doctors have a vital role to play in supporting and facilitating breastfeeding, and without the appropriate knowledge they can often inadvertently sabotage it. This book will be of interest to GPs and paediatricians as well as nurse prescribers, midwives and health visitors.
