Generalized Additive Models - T.J. Hastie
2017-10-19

This book describes an array of power tools for data analysis that are based on nonparametric regression and smoothing techniques. These methods relax the linear assumption of many standard models and allow analysts to uncover structure in the data that might otherwise have been missed. While McCullagh and Nelder's Generalized Linear Models shows how to extend the usual linear methodology to cover analysis of a range of data types, Generalized Additive Models enhances this methodology even further by incorporating the flexibility of nonparametric regression. Clear prose, exercises in each chapter, and case studies enhance this popular text.

Saint Teresa of Avila - Marcelle Auclair 1953 Marcelle Auclair, the author, a delightful, sparkling woman of many achievements, strikes one as being nearly as versatile and enterprising as her favorite saint. Though born in France, she grew up in Chile, where Spanish ways of life and thought became second-nature to her. On her return to France, at the age of twenty, she married the novelist Jean Prevost, brought up three children, traveled extensively, published several novels herself, and founded and edited Marie-Claire, an outstandingly successful woman's journal. All through her life Marcelle Auclair assiduously studied the writings of Teresa of Avila. She admired in her an essentially modern woman: inventive, practical, gallant and intrepid, with tremendous organizational capacities, whose genius permitted her to break through the restrictions of her time. Madame Auclair decided to retranslate the saint's writings and to write her

life. With characteristic determination, she attempted to obtain the seemingly impossible (it had never been done before) - an authorization from the Holy See to enter the Carmelite cloisters in Spain and to gather authentic background material for her projected work. The permission was granted. On her return to Paris she gave up all her professional obligations and for two years virtually went into retreat, devoting her entire time to the accomplishment of what is no doubt the most vivid existing biography of this great saint.

What Became of the White Savage - François Garde 2015-05-05

Some time in the 1840s, Narcisse, a young French sailor is abandoned on the coast of Australia and given up for dead by his shipmates. Seventeen years later he is found living among aboriginal peoples, having apparently forgotten everything of his original identity, including his native French language. Octave de Vallombrun, a well-meaning geographer, takes him under his wing and sets out to bring Narcisse, now known as the "white savage" back to civilisation and to find out what happened during those seventeen years. Observing Narcisse's struggle to adjust to the ways of the white man, Octave too begins to question his assumptions about what it means to be civilised, and to see in a new light the man known as the "white savage".

Night - Elie Wiesel 2013-09-10

A New Translation From The French By Marion Wiesel Born in Sighet, Transylvania, Elie Wiesel was a teenager when he and his family were taken from their home in 1944 and deported to the Auschwitz concentration camp, and then to Buchenwald. Night is the terrifying record of Elie Wiesel's memories of the death of his family, the death of his own innocence, and his despair as a deeply observant Jew confronting the absolute evil of man. This new translation by his wife and most frequent translator, Marion Wiesel, corrects important details and presents the most accurate rendering in English of Elie Wiesel's seminal work.

Settlers' Creek - Carl Nixon 2010-12-01

A poignant and contentious novel by a rising star of New Zealand literature. Box Saxton just wants to bury his teenage stepson's body in the churchyard near the farm where Box grew up. What happens, though, when the boy's biological father, a Maori leader, unexpectedly turns up in the days before the funeral and forcibly takes the boy's body? According to Maori custom the boy must be buried in the tribe's ancestral cemetery at the small coastal town of Kaipuna. According to the law there is very little Box can do. With no plan and little hope, Box gets in his old truck and drives north, desperate and heartbroken. *Settlers' Creek* explores the claims of both indigenous people and more recent settlers to have a spiritual link to the land. 'Brave, bold and unflinching, Carl Nixon's *Settler's Creek* is one of the best novels to come

out of New Zealand. It's not only a gripping, brutal, thriller but also a dissection of a country and its culture. It's the kind of book that gets you run out of town.' - Witi Ihimaera

Rethinking education: towards a global common good? - UNESCO
2015-05-26

Economic growth and the creation of wealth have cut global poverty rates, yet vulnerability, inequality, exclusion and violence have escalated within and across societies throughout the world. Unsustainable patterns of economic production and consumption promote global warming, environmental degradation and an upsurge in natural disasters. Moreover, while we have strengthened international human rights frameworks over the past several decades, implementing and protecting these norms remains a challenge. These changes signal the emergence of a new global context for learning that has vital implications for education.

Rethinking the purpose of education and the organization of learning has never been more urgent. This book is inspired by a humanistic vision of education and development, based on respect for life and human dignity, equal rights, social justice, cultural diversity, international solidarity and shared responsibility for a sustainable future. It proposes that we consider education and knowledge as global common goods, in order to reconcile the purpose and organization of education as a collective societal endeavour in a complex world.

Cerebral Localization - K.J. Zülch
2012-12-06

The demonstration of the basic brain mechanism through studying the partially commissure-sectioned case appears to be a most promising enterprise. The work with animals of HAMILTON and others in elucidating psychological brain processes heretofore not imagined are mere indications of what the potential seems to be. Study of the partially disconnected patient seems equally revealing and productive in showing how many high level cognitive activities are managed in the cerebral flow of information. With respect to the issue of localization of function, it would seem clear that those cerebral areas clearly involved in the immediate processing of raw sensory information can be selectively and specifically isolated and disconnected. In other words, the informational products of the long axonal type cells of Golgi, which MARCUS JACOBSON claims are the brain cells under strict genetic control, can be isolated, whereas the products of more complex and integrative mental activities which are managed by the more mutable Golgi type II cells do not seem to be so specifically disposed. Thus, these data suggest the lateralized specialities of the various left and right brain areas can make their contribution to the cerebral activities of the opposite hemisphere through almost any callosal area regardless of its size and location. Indeed, this interpretation suggests to me that the long standing issue of the extent of localization could be better understood by considering the dichotomy in genetic specification as offered by HIRSCH and JACOBSON (1974).

From Sign to Image - Abdelkebir Khatibi 1995

This text is among the first to delve deeply into the little known history of Moroccan carpets. Among the revelations this book provides is the correction of the widely held belief that "no Moroccan or Tunisian carpets predate the 19th century". There are three sections covering the historical, technical and aesthetic significance of Morocco's carpet weaving heritage. The technical and aesthetic sections are the most exhaustive - the former covering the three main styles of carpets, and the latter exploring the various styles and thoughts that inspire the imagery of the carpets.

The Medical Mandarins - George Weisz 1995

This wide-ranging and imaginative book examines the social and scientific role of the French Academy of Medicine from its creation in 1820 to the outbreak of the Second World War. The first chapters focus on the institution and its activities, including the evaluation of medical innovations and the cultivation of professional memory through eulogies and institutional art. Weisz argues that the Academy was gradually transformed from a low-status public institution that was central to French medical science in the nineteenth century to an establishment institution largely irrelevant to medical science but playing a key role in public health policy. The second half of the book uses the activities and literary productions of the Academy to explore broader issues of medical history. The Academy's role in the regulation and scientific study of mineral waters illuminates processes of discipline formation in medical science and explores the therapeutic specificity of French medicine. Academic debates are used to investigate the appropriation of new research techniques like animal experimentation and quantification in therapeutic reasoning. Academic eulogies provide a starting point for the evolving medical and scientific reputation of Laennec, the inventor of auscultation, Using techniques of prosopography applied to the membership of the Academy, Weisz goes on to analyze the role of the Parisian medical elite in French medicine and its social place within the French bourgeoisie. His concluding chapter examines the emerging self-images of this Parisian elite in academic eulogies.
